

Turntables & Transfer Tables for Rail

From Conceptual Engineering to Installation & Service

Turntables & Transfer Tables for Rail

Handling Specialty Transfer Tables and Turntables are used throughout the Rail Transportation Industry to provide high efficiency traffic flow between tracks in railway maintenance shops.

ISO 9001:2015 Registered **Z299.2**

Turntables & Transfer Tables for Rail

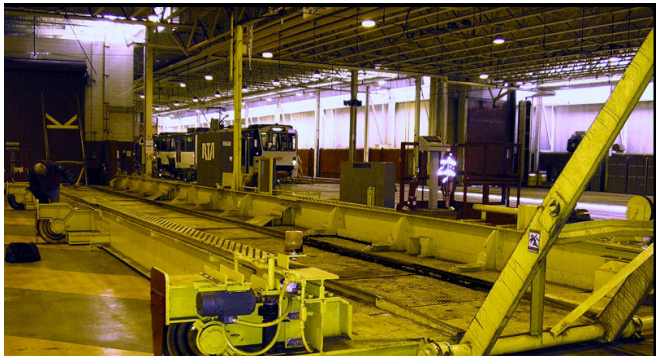

Transfer Tables

Handling Specialty designs their Transfer Tables for the customer's specific maintenance shop applications.

Our designs are based on the customer's required:

- Capacities
- Lengths
- Depths (pit or a non-pit design)
- Indoor or outdoor use
- Covered or uncovered
- Cab and/or wireless controls
- Manual, semi-automatic or fully automatic operation

Movement of vehicles on and off the table can also be done by winches supplied on the Transfer Table or in combination with progression systems.

Turnables & Transfer Tables for Rail

Turntables

Handling Specialty designs their Turntables to withstand the rugged and abusive environments they will be subjected to onsite.

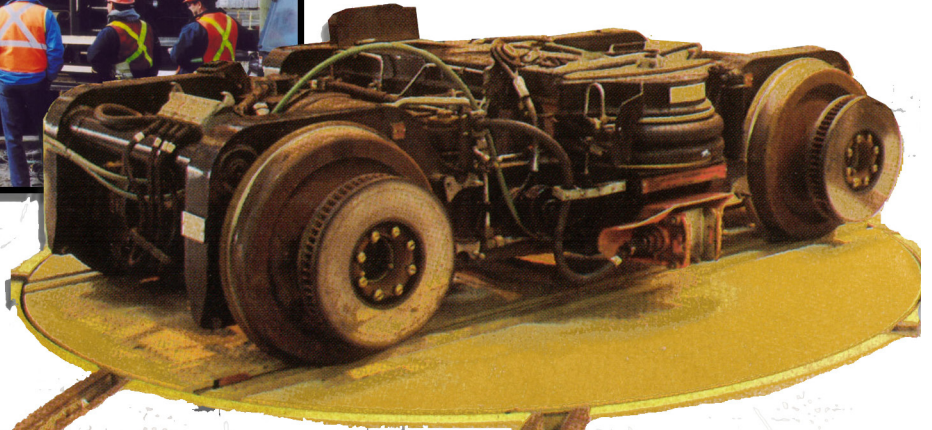

Our designs are based on the customer's required:

- Capacities (both turning and rollover)
- Lengths/Diameters
- Indoor or outdoor use
- Manual, semi-automatic or fully automatic operation
- Single tracks or cross tracks (a 90 degrees)

Larger diameter turntables (up to 250 Ton capacity) are used to rotate your rail vehicles in applications where rail yard space is at a premium.

Small diameter turntables used for rotating trucks (bogies) are designed with a large centre slewing bearing. Therefore, the bearing can withstand large cantilever forces; additional set of support wheels near the outside diameter of the turntable is not required. This design also simplifies the installation because the additional pit track for the support wheels is not required. Furthermore, the slewing bearing allows for an easy manual rotation of the turntables by an operator.

Turntables & Transfer Tables for Rail

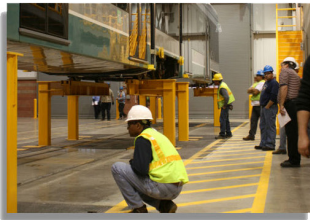

Turntables & Transfer Tables for Rail

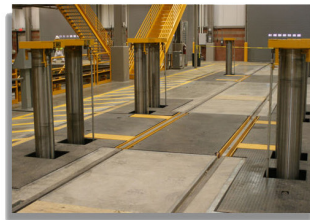

Equipment for Heavy Rail and Mass Transit

Our product line includes:

Car Hoists

Body Hoists/Supports

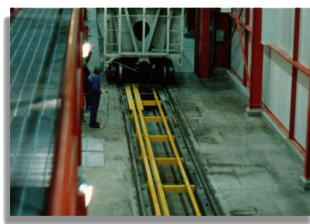

**Portable Electrical Jacks
(5 ton to 60 ton Capacity)**

Truck (bogie) Hoists

Car Progression Systems

Rip Jacks

Drop Table (Single Axle)

Droptable (Full Truck)

Trackmobile®

Handling's product line is designed to enhance the maintenance operations of your company's rail vehicle.

Before specifying the required equipment in your new shop or shop expansion plans, please give our technical sales a call.
